SUMMARY

Detail-oriented Computer Science undergraduate with hands-on AI/ML and software engineering experience from internships at Codec Technologies and TailsMart. Proficient in Python, Java, SQL, and cloud fundamentals. Passionate about leveraging data-driven solutions and a collaborative mindset to build scalable software and advance AI initiatives.

ACADEMIC QUALIFICATION

V.S.B. College of Engineering and Technical Campus , <i>B.E. Computer Science</i> 75.3%	2023 – 2027
Vivek Vidyalaya Matric Hr Sec School , <i>HSC</i> 74.5%	2021 – 2023

SKILLS

- **Technical Skills:** Java, C++, SQL, Basic knowledge of AWS cloud
- **AI & Productivity Tools:** cursorAI, claude, GitHub, VS Code

SOFT SKILLS

- | | |
|--|--|
| - Time management. | - Quick learner and adaptable to new technologies. |
| - Team collaboration and leadership in group projects. | |

EXPERIENCE

Codec Technologies, *Artificial Intelligence internship*

- Learned and applied basic Artificial Intelligence and Machine Learning concepts.
- Gained hands-on experience in data preprocessing, model training, and model evaluation.

TailsMart, *Software Developer internship*

- Assisted in the development and testing of software applications.
- Collaborated with team members to improve application functionality and user experience.

TRAINING/COURSE

AWS Foundations: Getting Started with the AWS Cloud Essentials.

04/2026 – 05/2026

- Learned cloud computing fundamentals including on-demand resource provisioning, pay-as-you-go pricing models, and the shared responsibility model.
- Explored AWS global infrastructure (regions, availability zones) and best practices for cost management and basic cloud security.

- Learned foundational concepts of Generative AI including large language models (LLMs), prompt engineering, and transformer architecture.
- Explored practical applications of generative models for text, image, and code generation using tools like ChatGPT and related frameworks.

PROJECT

Stock Price predictor

- Built a full-stack stock analytics web app (FastAPI, WebSockets, vanilla JS, Plotly.js) that pulls live historical market data for any public ticker and renders interactive multi-pane price/indicator charts.
- Designed and trained a Gradient Boosting Regression model (Scikit-learn) to predict next-day closing prices from 10+ engineered technical indicators (SMA, EMA, RSI, MACD, Bollinger Bands), with chronological train/test validation and directional accuracy scoring.
- Implemented a real-time WebSocket price feed with auto-reconnect/backoff and heartbeat keep-alive for resilient live UI updates.

Asset Management System

- Designed and developed a Java-based asset management system to track, allocate, and monitor company hardware/software assets across departments, reducing manual tracking effort.
- Implemented core modules for asset registration, allocation/return workflows, and depreciation tracking with role-based access control (admin/employee) using JDBC and SQL.
- Built a normalized SQL database schema to manage asset lifecycle states (in-use, in-repair, retired) and generate reports on asset utilization and compliance status.

DECLARATION

I hereby declare that the above information is true to the best of my knowledge.
